CV – ESTHER WAIRIMU GITOME

Junior Software & System Engineer

+254 792 668 224 | estherwgitome@gmail.com | linkedin.com/in/esther-gitome-4ba90a317

PROFESSIONAL SUMMARY

Software Engineering graduate (December 2026) with hands-on experience from a DevOps and Software Development internship, building and troubleshooting applications in Java, JavaScript and SQL, integrating APIs, and monitoring systems on Linux. Built a Java simulator of enterprise gateway services (Bulk SMS, USSD, M-Pesa and more) and full-stack web and mobile applications. A fast learner who takes ownership of problems, enjoys diagnosing technical issues, and is eager to grow into configuring, integrating and supporting enterprise systems.

TECHNICAL SKILLS

Programming: Java, JavaScript, Object-Oriented Programming, Data Structures

Databases: SQL, MariaDB / MySQL, PostgreSQL, JDBC, Database Management

APIs & Integration: RESTful APIs, SOAP APIs, Axios, Firebase integration

Systems & Monitoring: Linux, Zabbix (dashboards and system monitoring), Apache Tomcat, troubleshooting and technical support

Web & Mobile: React.js, React Native, Node.js / Express, Jakarta EE, HTML5 / CSS3, WordPress / WooCommerce

Tools: Git / GitHub, Maven,

PROFESSIONAL EXPERIENCE

DevOps and Software Development Intern *August 2025 – November 2025*

MSpace Solutions Ltd

- Developed and tested core user-access functionality in Java applications, including login, registration, signup and password recovery.
- Connected Java applications to MariaDB using JDBC, wrote SQL queries, retrieved records with ResultSet, and managed database users and privileges.
- Configured, deployed and tested Java web applications on Linux using Apache Tomcat, Maven and Jakarta EE.
- Created and used Zabbix dashboards for system monitoring and reporting.
- Took part in application testing, troubleshooting, documentation and technical support activities.
- Built an Enterprise Gateway & NOC Simulator in Java covering Bulk SMS, USSD, Shortcode, Email, WhatsApp and M-Pesa gateway services, applying OOP and data structures (ArrayList, HashMap, queues, arrays).

PROJECTS

Enterprise Gateway & NOC Simulator *Java | OOP | Data Structures*

- Developed a Java simulator of enterprise gateway and Network Operations Centre (NOC) services.
- Simulated Bulk SMS, USSD, Shortcode, Bulk Email, Bulk WhatsApp and M-Pesa gateway services.
- Implemented service request processing, searching and sorting functionality.
- Applied classes, encapsulation, data structures and try-catch exception handling to manage application errors.

Rental Management System – Java Web Application (in progress) *Java | Jakarta EE | MariaDB | JDBC*

Internship project | PrimeFaces, SQL, Maven, Apache Tomcat

- Developing a rental management system for managing properties, units, tenants, rental information, announcements and issues.
- Built application interfaces with Jakarta EE and PrimeFaces and connected the application to MariaDB using JDBC.
- Implemented authentication and role-based access for different types of users.
- Used Maven for project and dependency management and Apache Tomcat for deployment and testing.

Rental Management System – Full-Stack Web Application (in progress) *React | Node.js | Express | PostgreSQL*

JavaScript, Vite, Tailwind CSS, Axios, SQL, REST APIs

- Developing a full-stack system for managing properties, rental units, tenants, announcements and tenant issues.
- Building RESTful APIs with Node.js and Express and connecting the React frontend to them using Axios.
- Designing and managing application data in PostgreSQL, connected through the pg package.
- Planning JWT-based authentication for secure user access.

Delivro – Food Ordering Mobile Application *React Native | Redux | Firebase | Sanity*

- Developed a mobile app for browsing restaurants and menus, managing a basket, and tracking order preparation and delivery.
- Implemented user registration and login, and integrated Firebase and Sanity as backend services.
- Used Redux for state management and React Navigation across authentication, restaurant, basket and delivery screens.

WordPress Online Shop (Personal Project) *WordPress | WooCommerce | Clothes Boutique theme*

- Designed, built and configured my own online clothing shop on self-hosted WordPress with WooCommerce.
- Customised the Clothes Boutique theme and built pages such as the About Us page and homepage.
- Set up and managed shop products, images and content through the WordPress dashboard.

Company Online Shop (WordPress / WooCommerce) *WordPress | WooCommerce | HTML | CSS | JavaScript*

- Worked on an existing company online shop, customising the homepage and shop content.
- Extended the site beyond the theme's default options by writing additional custom HTML, CSS and JavaScript.

EDUCATION

Bachelor in Software Engineering *September 2020 – December 2026*
KCA University

Kenya Certificate of Secondary Education, Kabare Girls High School *2016 – 2019*
Kenya Certificate of Primary Education, Nyeri Good Shepherd Primary School *2004 – 2015*

REFEREES

Francis Amenya – Senior Software Engineer, Techducate Africa
